

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

**New Brunswick Notes.**—Lincoln's Sparrow (*Melospiza lincolni*) was observed near Fredericton, N. B., on August 10, 1900, and a Cardinal Grosbeak (*Cardinalis cardinalis*) at Scotch Lake on August 20, the second occurrence of this species here known to me. Three male Purple Finches (*Carpodacus purpureus*) were observed at Scotch Lake on February 4, 1901, and seven Goldfinches (*Astragalinus tristis*) at the same place on February 15. Our ordinary winter birds have been very scarce. — WM. H. MOORE, *Scotch Lake, York Co., N. B.*

**Birds observed during a Steamer Voyage from San Francisco to Victoria, British Columbia.**—*September 8, 1898.* Midday; within sight of the surf off Point Reyes, California; clear and calm. Several Western Gulls were near the steamer and a Black-footed Albatross followed in its wake. A small flock of shore birds, apparently Northern Phalaropes, passed by, flying northward instead of southward.

North of Point Reyes, about ten miles offshore. A few Dark-bodied Shearwaters were skimming over the surface. A Pink-footed Shearwater, as it coursed about, came near the ship, and five Black-footed Albatrosses followed astern.

As the afternoon advanced a brisk breeze developed. Black-footed Albatrosses continued in attendance; several Pink-footed Shearwaters were passed by the way.

*September 9.* Morning; about seven miles off Rogue River, Oregon; sea like glass. Cassin's Auklets were abundant in companies on the water. An Olive-sided Flycatcher and a Mourning Dove alighted on the vessel. Several other doves were seen. Five Black-footed Albatrosses accompanied us. The list of birds was further increased by a company of Western Gulls, two Pelagic Cormorants, a Tufted Puffin, a Loon, and a Dark-bodied Shearwater.

North of Cape Blanco; twenty miles offshore; land hidden from view. An American Pipit and a Red-breasted Nuthatch came aboard; there being no better substitute for a tree the Nuthatch hunted for food on one of the masts. Several Tufted Puffins were sighted and six Black-footed Albatrosses bore us company.

*September 10.* Morning; near Cape Flattery; smoky from forest fires; the ocean without a ripple. A Sandwich Sparrow and a Yellow Warbler boarded the ship; we passed a small band of Dark-bodied Shearwaters resting on the water.

Between 10 and 11 A.M., a Townsend's Warbler, a Wilson's Warbler, several Yellow Warblers, and an American Pipit sought refuge on the deck.

Strait of Juan de Fuca; 2 P.M.; land hidden by smoke. A Red-shafted Flicker appeared and alighted on the stays supporting the smokestack, completing the list of the birds of the voyage.—LEVERETT M. LOOMIS, *California Academy of Sciences, San Francisco.*
